

MICROFI - CEMAC AUDIT REPORT

System Audit Trail & Regulatory Compliance Framework Specification

Target System: MICROFI Collection Platform
Scope: Financial, Security & Synchronization Logs

Regulatory Framework: COBAC Standards
Generation Date: September 2, 2026

1. Introduction & Objectives

This document establishes the functional and technical specifications for generating audit reports, transactional journals, and compliance exports within the MICROFI platform tailored for the CEMAC microfinance sector. Ensuring transparent reporting is vital for meeting Central African Banking Commission (COBAC) mandates and mitigating internal and operational risks.

2. Core Audit Log Categories

The PDF export engine must compile structured reports across four key pillars:

- Financial & Transactional Logs:** Full records of deposits, savings, and loan repayments, linking field terminals, collectors, and exact timestamps.
- COBAC Regulatory Compliance:** KYC validation histories, anti-money laundering (AML) screening logs, and automated threshold alerts.
- Security & Administrative Trails:** Immutably recorded events including account resets, transaction cancellations, and admin overrides executed via authorized devices.
- Offline Synchronization Logs:** Chronological sequencing of field data synced post-connection to resolve data conflicts securely.

3. Sample Audit Trail Export Format

Below is an illustrative schema of how transactional audit logs are structured and formatted within system-generated PDF exports:

Timestamp	Event ID	Category	Agent / Terminal	Details & Operation	Status
2026-09-02 08:15:22	LOG-88412	Financial	AG-YDE-04 (Mob-T09)	Cash deposit: 150,000 XAF (Acc: #CEM-9921)	Verified
2026-09-02 08:30:10	LOG-88413	Security	Admin (Phone-Master)	Emergency sync override authorized	Logged
2026-09-02 09:05:45	LOG-88414	Compliance	SYS-AUTO	KYC threshold alert: ID scan verified	Cleared

Timestamp	Event ID	Category	Agent / Terminal	Details & Operation	Status
2026-09-02 09:45:12	LOG-88415	Synchronization	AG-DLA-12 (Mob-T02)	Offline queue flush: 14 transactions synced	Synced

Note on PDF Export Security: All exported PDF reports must include cryptographic checksums (SHA-256 hashes) and digital watermarks to prevent forgery and ensure non-repudiation when submitted to external auditors or regulatory bodies.

4. Validation & Sign-off

Generated audit reports must be officially certified and archived for regulatory inspections.
